

## **Single /double system online MODBUS protocol**

- 1.Communication adopts RS485 bus, asynchronous serial signal 1 start bit, 8 data bits, 1 end bit, no odd-even check.
- 2.RTU protocol conforming to the standard MODBUS, 16-bit data structure, 16-bit CRC low byte before the upper byte.
- 3.The unit is address #1, address #0 is the broadcast address
- 4.The wire controller (touch screen) or central controller is the calling host, the controller is the slave; the slave address is fixed to FFH when using the wire controller; the slave address is decided by dial switch or parameters on the controller when using the central controller.

### **5. Master-slave communication uses three commands:**

#### **Command 03H (Query 1 or more registers)**

Send command: [device address] + [command number 03H] + [start register address high 8 bits] + [low 8 bits] + [high number of read registers 8 bits] + [low 8 bits] + [CRC checker The lower 8 bits of the check] + [High 8 bits of the CRC check]

Device Response: [Device Address] + [Command Number 03H] + [Number of Bytes Returned] + [Data 1] + [Data 2] +...+ [Data n] + [Low 8 bits of CRC checksum ] + [High 8 bits of CRC check]

#### **Command 06H (modify a single register)**

Send command: [device address] + [command number 06H] + [required register address higher 8 bits] + [low 8-bit] + [lower data upper 8 bits] + [low 8-bit] + [CRC] Low 8 bits of the check] + [High 8 bits of the CRC check]

Device Response: If the command sent by the computer is returned as it is, it will not respond.

#### **Command 10H (modify multiple registers)**

Send command: [device address] + [command number 10H] + [start register address high 8 bits] + [low 8 bits] + [high register 8 bits] + [low 8 bits] + [register bytes] + [Data 1 high 8 bits] + [Low 8 bits] +.... + [Data N high 8 bits] + [Low 8 bits] + [Low 8 bits of CRC check] + [High 8 bits of CRC check ]

Device Response: [Device Address] + [Command Number 10H] + [Highest starting register address 8 bits] + [Low 8 Bits] + [High Register Number 8 Bits] + [Low 8 Bits] + [Low CRC Checksum] 8 bits] + [High 8 bits of CRC check]

Parameter address (R means the parameter is read-only, RW means the parameter is readable and writable)

Data Address	Data Description	Setting Range	Remarks
RW 0x0000	Control sign		The definition of the flag bit is followed by a description
RW 0x0001	Mode selection	0~4	0: single hot water, 1: single heating, 2: single cooling, 3 :hot water + heating, 4: hot water + cooling, default :1
RW 0x0002	L0 Hot water difference	2°C~18°C	Default 3
RW 0x0003	L1 Hot water setting temperature	20~58°C	Default 55°C
RW 0x0004	L2 Cooling difference	2°C~18°C	Default 5°C
RW 0x0005	L3 Cooling setting temeprature	10°C~32°C	Default 12°C
RW 0x0006	L4 Heating difference	2°C~18°C	Default 5°C
RW 0x0007	L5 Heating setting temperature	12°C~99°C	Default 45°C
RW 0x0008	L6 Ambient air temperature below which electric heater is allowed to start	-30°C~35°C	Default 0°C
RW 0x0009	L7 Return water temperature	20°C~80°C	Default 30°C
RW 0x000A	L8 Water tank temperature below which allow to	20°C~80°C	Default 48°C (20°C: compensate cool water is not limited by water tank temperature)

	<b>compensate cool water</b>		
<b>RW 0x000B</b>	<b>L9 Compressor current setting</b>	<b>0A~48A</b>	<b>Default 0A</b>
<b>RW 0x000C</b>	<b>H2 Ambient air temperature below which heat pump will stop working to protect</b>	<b>-30°C~0°C</b>	<b>Default -26°C</b>
<b>RW 0x000D</b>	<b>H3 Defrost period setting</b>	<b>20min~90min</b>	<b>Default 45min</b>
<b>RW 0x000E</b>	<b>H4 Air HE lowest tube temp below which system will enter defrost</b>	<b>-15°C~-1°C</b>	<b>Default -3°C</b>

#### Control flag

bit 0 : 0 ON/OFF

Default :0

bit 1 : 0 Water tank electric heater installation position on water tank/1Water tank electric heater installation position on tube

Default:1

bit 2 : 0 Forced electric heater off /1 Forced electric heater off Default:0

bit 3 : Self-defined parameter D Default :0

bit 4 : 0 Main circuit electronic expansion valve manual/1Main road electronic expansion valve automatic Default:1

bit 5 : 0 Auxiliary Circuit Electric expansion valve manual /1 Auxiliary Circuit Electric expansion valve manual Default:1

bit 6 : 0 Constant temperature water pump continues to open/1 Constant temperature water pump stop Default:0

**bit 7 : 0 Defrosting compressor stop/1 Defrosting compressor on Default:0**

**Timer flag**

**bit 0 : 0 Period 1 Time OFF/1 Period 1 Time ON Default:0**

**bit 1 : 0 Period 2 Time OFF/1 Period 2 Time ON Default:0**

**bit 2 : Reserved**

**bit 3 : Reserved**

**bit 4 : Reserved**

**bit 5 : Reserved**

**bit 6 : Reserved**

**bit 7 : Reserved**

**Output flag 1**

**bit 0 : Compressor 1**

**bit 1 : Outside fan motor**

**bit 2 : 4-way valve**

**bit 3 : Hot water pump**

**bit 4 : Water tank electric heater**

**bit 5 : 3-way valve**

**bit 6 : A/C(floor heating) electric heater**

**bit 7 : Filling valve**

**Output flag 2**

**bit 0 : Crankcase heater**

**bit 1 : Bottom electric heater**

**bit 2 : A/C(floor heating) water pump**

**bit 3 : Return valve**

**bit 4 : Compressor2**

**bit 5 : Reserved**

bit 6 : Reserved  
bit 7 : Reserved

#### Status flag 1

bit 0 : Defrosting  
bit 1 : 0 Cooling demand switch ON/1 Cooling demand switch OFF  
bit 2 : 0 Emergency switch ON/1Emergency switch OFF  
bit 3 : 0 Heating demand switch ON/1Heating demand switch ON  
bit 4 : 0 Single phase/1 Three phase  
bit 5 : 0 Hot water flow switch connected/1 Hot water flow switch disconnected  
bit 6 : 0 A/C flow switch connected/1 A/C flow switch disconnected  
bit 7 : Reserved

#### Status flag 2

bit 0 : 0 Low water level switch ON /1 Low water level switch OFF  
bit 1 : 0 High water level switch ON /1 High water level switch OFF  
bit 2 : 0 Middle water level switch ON /1 Middle water level switch OFF  
  
bit 3 : Hot water side First-class antifreeze  
bit 4 : Hot water side Secondary antifreeze  
bit 5 : A/C side First-class antifreeze  
bit 6 : A/C side Secondary antifreeze  
bit 7 : Reserved

#### Status flag 3

bit 0 : 0 High pressure 1 switch connected /1 High pressure 1 switch disconnected  
bit 1 : 0 High pressure 2 switch connected /1 High pressure 2 switch disconnected  
bit 2 : 0 Low pressure 1 switch connected /1 Low pressure 1 switch disconnected  
bit 3 : 0 Low pressure 2 switch connected /1 Low pressure 2 switch disconnected

**bit 4 : Reserved**

**bit 5 : Reserved**

**bit 6 : Reserved**

**bit 7 : Reserved**
